

I support amending the general statutes to require the regional community-technical college to obtain input from local manufacturers specific to the workforce needs and opportunities of such college's service area. This input should include suggested changes from local manufacturers on developing, revising or expanding such college's manufacturing technology program.

As a local manufacturer and recruiter from the current NVCTC Manufacturing program. I would like the program to support and train perspective employees in the skills needed by the surrounding manufacturers. Current suggested changes I support are the addition of a manufacturing materials course and machinery including deep draw press and EDM machine.

Thank You,
Jay Toner
